MGO cooling system

The low viscosity of the sulphur fuels may cause engine troubles. This MGO Cooling System is the best solution to achieve both “low sulphur” and “low viscosity”.

- SOx emission control from ships
- EU Directive / Less than 0.1% sulphur content from 1st January, 2010
- CARB(California Air Resource Board) /Less than0.1% sulphur content from 1st January, 2012
- SECA(Sulfur Emission Control Area)/Less than0.1% sulphur content from 1st January, 2015
