

Dual Fuel Engines, propulsion

YANMAR YANMAR CO., LTD.

<http://www.yanmar.com>

6EY26DF

The major feature of this engine is the redundancy capability due to the use of dual fuels. It is possible to continue operation either in the gas or diesel mode, changed over automatically, should either mode is lost.

In addition, the micro-pilot with its intense energy, ensures stable ignition capability. As a result, since the capability to cope with faulty firing is enhanced, the application to the direct-coupling main engine with varied speed, is made possible.

Dual fuel engine has the following characteristics.

- Adaption IMO Tier 3 regulation.
- Redundancy by Dual Fuel (LNG and MDO / HFO).
- Stable ignition ability by Micro Pilot.
