## Aquarius Marine Solar Power

Aquarius Marine Solar Power is an integrated renewable energy system for ships that includes a computer system, energy storage solution & marine solar power array.

The energy collected via the marine solar panel array or string of photovoltaic (PV) panels can be used to power a DC load, provide back-up power or be connected to an AC load via an inverter. Thus any ship can tap into the clean and renewable energy provided by the sun.

Equipment performance, system management, alarm monitoring and data logging functions are performed by the Aquarius MAS. This reliable marine computer system can also calculate vessel emissions and monitor fuel consumption.
